

# 1. Wizard Wave (Derived from Mango Dynamic - Premium Indicator)

- Strategy name: Wizard Wave
- Strategy type: Higher timeframe trend trading strategy
- Strategy description: Uses the Mango Dynamic/Wizard Wave to ride trends on higher timeframes to capture big trend returns in either direction.
- Best timeframes: 1 Week, 4D, 1D, 12H, 4H
- Best market conditions: Trending markets, when price is trending in one direction
- Best assets to trade: Assets, Bitcoin, Gold, SPX, Nasdaq, Crypto
- Typical RR for average trade: 3R+
- Good trade examples with entry and exit logic:
  - **Example 1: Zora Long on 4H - 3R Trade**
  - Waited for pullback into Bid Zone (start bidding) or the Mango Dynamic to long

- Exit when lose the dynamic (image below)

- - Entry conditions for longs: Condition 1 - Trend is bullish and price pulls back into the wizard/dynamic wave/cloud and is within the bid zone. Condition 2- price closes above indicator and is within the bid zone
  - Exit conditions for longs: when the trend indicator flips to bearish, the trailing stop loss is hit or a 3R+ reward is achieved
  - Entry conditions for shorts: condition 1 - Trend is bearish and price spikes back into the wizard/dynamic wave/cloud. Condition 2 - price closes below indicator and is within the bid zone
  - Exit conditions for shorts: when the trend indicator flips to bullish, the trailing stop loss is hit or a 3R+ reward is achieved
  - Differences in timeframes and assets:
    - Trends on shorter timeframes usually don't last as long - its choppy (12H and 4H)
    - Trends on higher timeframes can last longer (1W, 4D, 1D)
    - Works better with equities rather than forex
  - ML features to use:

- 

### 3. CLS Range

- Strategy name: CLS Range
- Strategy type: fakeout
- Strategy description: Institutions and big market makers trick retail into FOMO, this strategy takes the same side as these big players and uses big candles on higher timeframes to trade ranges
- Best timeframes: 1H, 4H, 1D
- Best market conditions:
- Best assets to trade: forex pairs,
- Typical RR for average trade:
- Good trade examples with entry and exit logic:
  - Doge short 1H (Daily CLS Candle)

Why it worked:

- 1H Premium Range
- 4H Bearish FVG
- Stop hunt/liquidity Sweep above
- Didn't exit even when was about to hit SL (High was 0.22527, SL was 0.2255)
- 1H bearish OB was never lost
- Entry: Waited for a rejection of the 4H Bearish FVG

- Exit: (Exited early but secured good profits)

- Entry conditions for longs:
  - **Bullish continuation setups**

- Model 1 - Entry after manipulation - 50% target
- Model 2 - Entry on pullback on level between 61.8 - 80% pullback

- Exit conditions for longs: take 50% profit at mid range, full exit at opposite side of range
- Entry conditions for shorts:
  - **Bearish Continuation setups**
  - Model 1 - Entry after manipulation - 50% target
  - Model 2 - Entry on pullback on level between 61.8 - 80% pullback

- Exit conditions for shorts: take 50% profit at mid range, full exit at opposite side of range
  - Differences in timeframes and assets: Swing for Weekly Levels, Scalp for Daily Levels
  - ML features to use:
  - Extra resources:
- 

## 4. Ichimoku System

- Strategy name: Ichimoku System
- Strategy type: trend following
- Strategy description: Uses the Ichimoku Kinko Hyo Cloud (Kumo) to determine trend direction and support/resistance zones.
- Best timeframes: 1H, 4H, 12H, 1D, 4D, 1W
- Best market conditions: Trending
- Best assets to trade:
- Typical RR for average trade:
- Good trade examples with entry and exit logic:
- Entry conditions for longs:
- Exit conditions for longs:
- Entry conditions for shorts:
- Exit conditions for shorts:

- Differences in timeframes and assets:
- ML features to use:
